Keywords: System Procurement

Abstract:

Making Procurement System program is needed to help the user especially in the search process or the data items needed by the user, and the mistakes that happened the very small because the process is computerized.

Based on the results of the discussion on this issue, it can be concluded:

1. Sistem computerization is very useful for easy, smooth flow of information data as well as reduce the risk of counting errors in recording and storage of goods in the transaction process from the supplier.
2. Finding and recording of data faster and more accurate
3. With fast service could not be separated from efforts to improve the existing system to run optimally and can provide a positive contribution to the company.
4. Making the report can be presented much more quickly and accurately in accordance with what is in want of an appeal with the manually.
